

MCT Autologous Exosomes Hair Revival at Kaya

Advanced Cellular Therapy for
Hair Regrowth

What is MCT Exosomes Hair Therapy?

MCT Exosomes Hair Therapy is a groundbreaking regenerative treatment that uses exosomes — powerful cellular messengers derived from Mesenchymal Cell Technology — to revive dormant hair follicles and improve scalp health.

These nano-sized vesicles are rich in growth factors, peptides, and cytokines, making them incredibly effective in treating early-stage hair loss, thinning, and poor scalp vitality. At Kaya, our dermatologists customize each protocol to stimulate long-term hair density and strength.

At Kaya Clinic, we pair this revolutionary laser with expert dermatological care to bring visible improvements with each session.

Benefits

of MCT Autologous Exosomes

- Boosts Natural Hair Regrowth at the Follicle Level
- Reduces Hair Thinning & Breakage
- Strengthens Hair Roots & Scalp Health
- Non-Surgical, Painless & Clinically Tested
- Suitable for Men & Women

Trusted by 3,000+
clients with proven satisfaction

I noticed reduced hair fall within two weeks and visible regrowth by the third session. This therapy gave me back my confidence.

Rahul Bhandari

After years of trying oils and shampoos, I finally saw real results. Kaya's exosome therapy is powerful and painless.

Neha Varma

Exosome therapy at Kaya has been a game-changer. My hair feels thicker, and my scalp is healthier than ever.
